

Heptagon Wafer-Level Offerings for Emerging Applications

- Company Overview
- Typical Products, Services, Applications
- Added Value to Customers
 - Benefits of Wafer-Level Optics (WLO) Technology
 - How WLO Technology Enables Your Applications
 - Ensuring the Performance and Reliability of Our Products
 - Work with Us From Design to Mass Production
- Summary

Focuslight Overview

- Founded in 2007 by Dr. Victor X. Liu, headquartered in Xi'an, China.
- A fast-growing company that develops and manufactures:
 - High-power diode laser components and materials (Photon Generation)
 - Laser optics components (Photon Control)
 - Photonics module and system solutions (Application Solutions) focusing on optical communication, automotive, pan-semiconductor, and medical and health applications.
- A **global photonics foundry** offering process development and manufacturing services to the global photonics community.
- Publicly listed in the Shanghai Stock Exchange (Ticker Symbol: 688167).

Milestones

2025

MLA for automotive projection awarded nomination from **European Tier 1**

2013

FOCUSLIGHT World's first monograph on packaging of HPDL published Founding of

2017

Technology breakthrough of gold-tin film deposition

2018

UV-L750 **Ultraviolet Line** Laser System won Prism Award

2019

Automotive LiDAR transmitter project awarded from international Tier 1

2019

Production of microoptics on world's largest glass wafer (300 x 300 mm²)

2023

Line Beam LiDAR **Transmitter Module** awarded nomination from European Tier 1

Focuslight Global Operations System

Leverage the strengths and capabilities of each location to cater to specific customer demands and optimize operational efficiency.

Through centralized decisionmaking, integrated operations, and lean management, a highefficiency, low-cost global operations system is established.

Further Expanding Flexibility

- Strong International Presence: Focuslight has strong presences in China, Germany, Switzerland, Singapore, and other global regions. We can leverage our existing manufacturing capabilities in these locations to meet customer demand efficiently.
- Flexibility in Manufacturing: As demand grows, we are exploring additional manufacturing capacity in Malaysia to complement our global operations. This flexibility allows us to adapt to the evolving needs of customers worldwide.

In a world of evolvingg market dynamics, we provide the solutions you need to stay ahead—flexible, efficient, and forward-thinking.

Heptagon is Back as a Focuslight Brand

Focuslight also plans a full integration of the acquired assets into its existing business structure. The company will reorganize and integrate certain assets into its Automotive Business Unit to strengthen its capabilities in serving global automotive customers. A **Strategic Growth Division** will be established to house the R&D teams and equipment related to consumer electronics, disposable medical solutions, and other emerging applications. All products associated with these assets will be unified under the **Focuslight** brand.

Meanwhile, a Global Photonics Foundry Business Unit will be established serving as a global center for photonics industry process development and manufacturing services under the historic Heptagon brand, which was originally founded in 1993 and will now continue its legacy of innovation, quality, and high-volume manufacturing under Focuslight's global operations, transforming its customer's ideas and designs into industry-powering photonics solutions.

Story of Heptagon

Established in 1993, Heptagon became a leading brand in the micro-optics industry, renowned for its expertise in advanced optical packaging, wafer-level micro-optical modules, and high-volume manufacturing for consumer electronics.

Now reborn as Heptagon Photonics, we continue this world-class legacy, delivering miniaturized, high-performance, and cost-effective photonics solutions to drive innovation in emerging markets.

Products and Services – Based on WLO and WLS

Under Heptagon Brand

Polymer on Glass (PoG) Optics

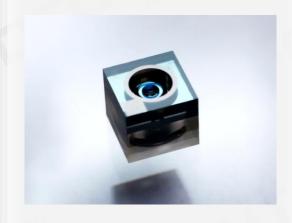

Micro lens arrays, diffusers, DOEs, Fresnel lenses

Semiconductor Wafer Foundry Service

Imprinting of optical components or lens modules on silicon wafers (e.g., for sensors, VCSELs, MicroLEDs)

Imaging Lens Modules

Stacked imaging lens modules compatible with CMOS

Sensor Module Packaging Service

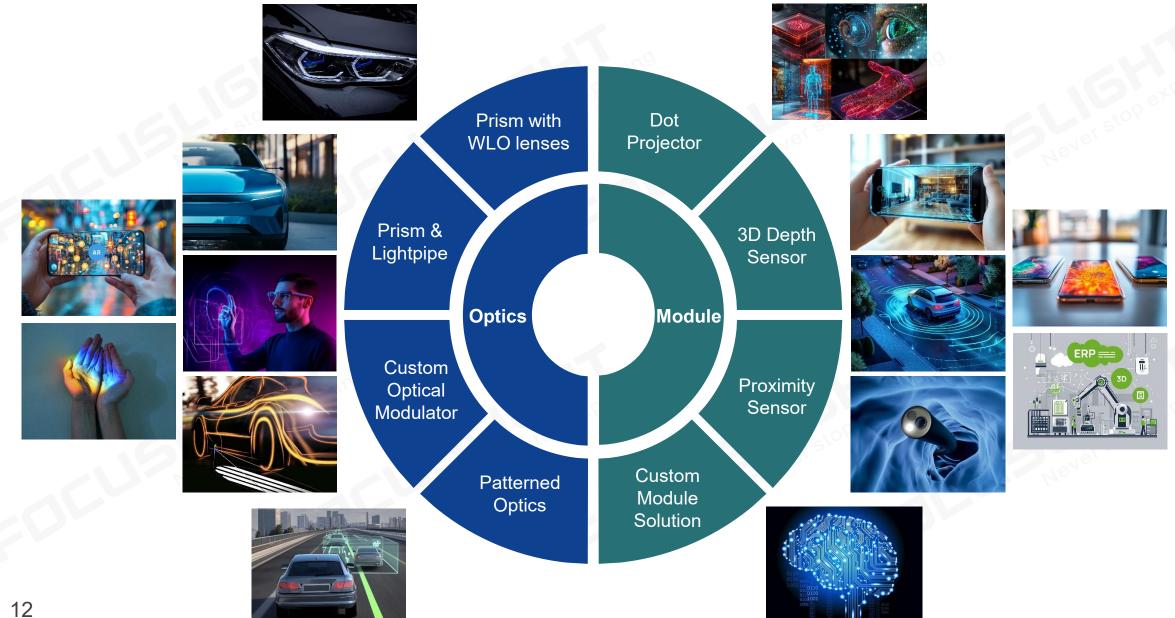

Packaging service for sensor modules

Wide Application Spectrum of Solutions

Typical Application and Products

% HEPTAGON

Consumer Electronics

Optical Sensing, Empowering AR/VR and AI to See

Multi-aperture wafer-level optical lens for AR-Light Engine

Micro-optics Modules for Vis & NiR solutions with multiple FoV options

Wafer level stacking that is fully reflowable and thus mass manufacturable

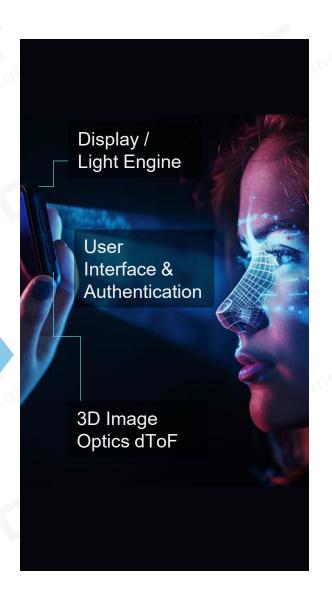

Leading thermal performance, ensuring simple thermal design

Face recognition, underdisplay face recognition

Complex micro dot projectors optics

Multi-Zone 3D sensor solutions, including dToF, Proximity sensor optics

Leading thermal performance, ensuring simple thermal design

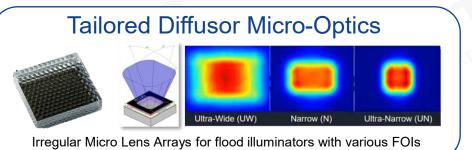

Typical Application and Products

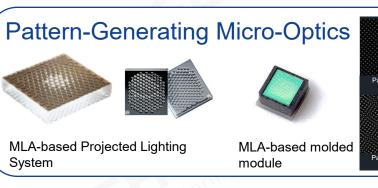

% HEPTAGON

Automotive, Robotics, Medical

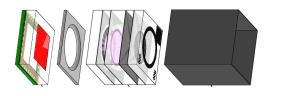

Imaging and Projection Micro-Optics

WLO lens & camera integration for chip-on-tip medical endoscopes

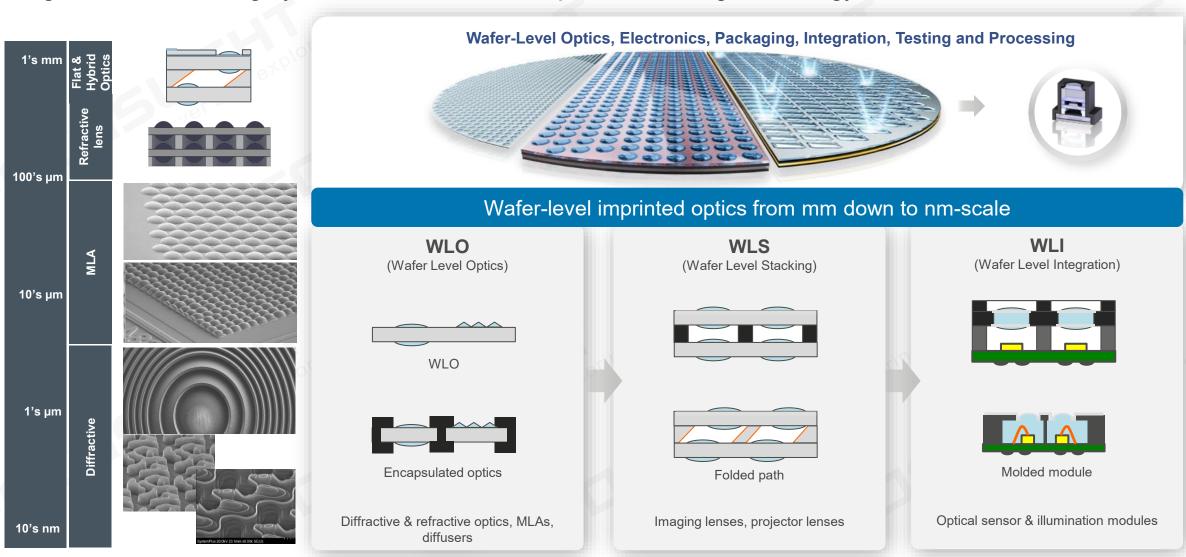

- Company Overview
- Typical Products, Services, Applications
- Added Value to Customers
 - Benefits of Wafer-Level Optics (WLO) Technology
 - How WLO Technology Enables Your Applications
 - Ensuring the Performance and Reliability of Our Products
 - Work with Us From Design to Mass Production
- Summary

Wafer Level Optics – Common Technology Base

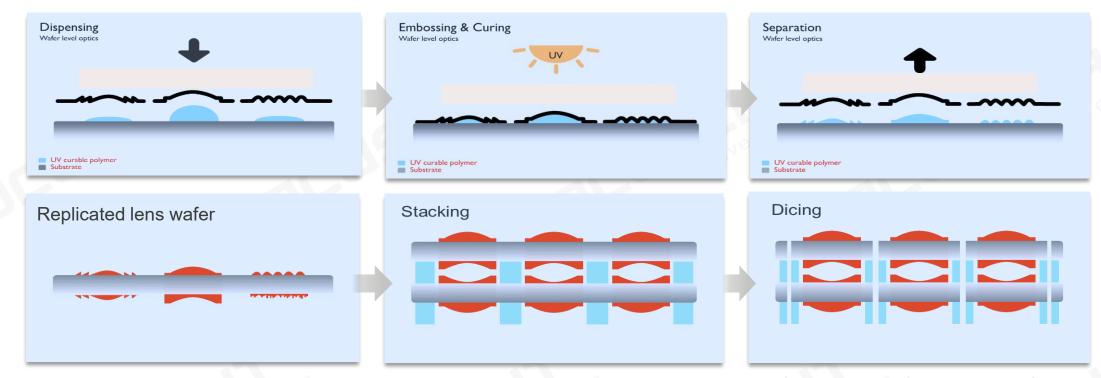

Design for Manufacturing by In-House Wafer Level Optics & Stacking Technology

Wafer Level Optics – Basic Manufacturing Process

WLO Competitive Advantages:

- Full wafer-scale process for high volume mass production
- UV curing, Low temperature, low pressure process
- · Conformal, microfluidic filling for micro/nano structures
- Conformal reproduction of features less the 1µm
- Reflowable optical material with high thermal performance

Unique Advantages for High Performance u-Camera:

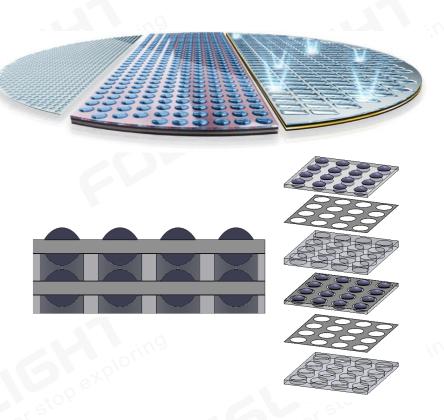

- Full Solution reflowability, no Compromise of Function, Fit, Cosmetics
- No barrels, mounts, highly compact, highly integrated optical solutions
- Miniaturization (mm²) flexibility, advanced capabilities, performance
- · Concepts to ensure quality mass production volume solutions
- Active Alignment to sensor delivering μWLO+Image Sensor Modules

Reflowable WLO-lens systems enable smallest footprint for µcamera devices and integration

Benefits – Wafer-Level Optics and Stacking

- Wafer-Level Optics (WLO) is an extremely high-precise fabrication technology for micro-optics at large volume
 - √ Wafer-scale process rapidly scalable for mass production
 - ✓ Tends to be profitable at high volume (MP >100 wafers per production) due to relatively high master & tooling cost
- Wafer-Level Stacking (WLS) enables high-performance and highly integrated micro-optical system products
 - ✓ Micron-level precision stacking of multiple optics wafers using leading-edge mask aligners
 - ✓ Wafer-scale bonding using rigid spacers and materials with excellent thermal and mechanical stability
 - ✓ Economic wafer-scale integration of added functions such as apertures, coatings, spectral filters, a.o.

- WLO & WLS benefits can be leveraged best in high-volume markets such as Consumer Electronics, AR/VR & Automotive
- Committed to providing reliable, high-performance WLO products and superior development services to our customers

Thermal Cycling Chamber x3
Temp. range: -55~150°C
Heating/freezing rate: ≤15°C/min

Salt Spray Test device x1 According to ISO 9227:2017

High / Low Temperature & High Humidity Chamber x5

Temp. range: -55~150°C R.H. range: 20~98% RH

Xenon lamp aging tester x1
According to DIN 75220

High-pressure boiling testing chamber x1

Temp. range: 100~132°C R.H. range: 100% R.H.

Pressure: <5atm

Reflow Oven x1

Work with Us – From Concept to Mass Production

Value Chain for Customer-Specific Micro-Optics Solutions

DFM* Stage

Outcome: Fullfleshed design for WLO-technology, manufacturability and risk analysis

Product Validation & Qualification

Outcome: 2nd or xth gen working samples, creation of product documentation (e.g. delivery req. specifications, drawings, technical datasheets etc.), cost analysis

Mass Production

WLO components fully compliant according to product requirements and test specs

*DFM: Design For Manufacturing

Design Feasibility Study

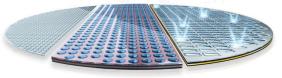

Outcome: Concept & prelim. design (fulfilling requirements, dimensions, est. cost),

Design Verification / POC Stage

Outcome: 1st gen working samples manufactured, testing data results for e.g. yield analysis

Ramp-Up

Wafer Level Optics (WLO)

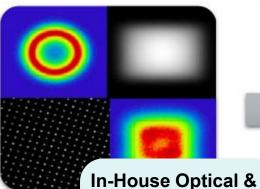

In-House Skills and Capabilities, Delivering Concepts, Design using DFM Development Cycle and Testing Ensuring high volume manufacturing, with reliability delivering proven Quality

Work with Us – From Concept to Mass Production

Full-Scale Capabilities for the Whole Process

- In-House Optical & Mechanical Design
- Location: Switzerland
- Ray trace and wave optics
- Full CAD capacity
- Physics simulation
- Single-Element to Full System Designs

- Master in-house and 3rd party
- Tooling: in-house
- Locations:
 Singapore and
 Switzerland
- Wide range of micro- and nanostructures possible

- In-House Wafer Rep., Stacking and BE Process
- Location: Singapore
- Epoxy on glass, multiple materials options available
- Capacity for high volume production of micro-optics

Final TestingLocation:

Singapore

- High UPH
- Wafer level, unit level, and module level testing with standard and customized systems

In-House Vertically Integrated Capability: Design, Development, Manufacturing, Reliability and Optical Test

Business Models

1

Based on the available technical capabilities, we provide our **product portfolio** (standard, customizable) or pure custom **Heptagon designs**.

The customer can then integrate these **Heptagon products** into their application solutions.

2

Based on the available technical capabilities, we cooperate with the customer, provide our **foundry service** to convert **customer's designs** into mass produced products.

These products will then be the **customer's own** products.

Both business models (products and foundry service) share the same technology base, yet they power the customer's business in different ways.

Summary

- 30+ Years of Optical Design & Simulation + Volume Production Expertise
- Advanced & Unique Wafer-level-Technologies to Provide Various Optical Solutions
- Reliable, Stable Quality + High Precision Products for Various Applications
- Fast Response + Customized Service Available

Your committed and reliable long-term partner in photonics application solutions

THANK YOU
